Exp 25:Write a Prolog program to implement Monkey Banana Problem

Code:

```
initial_state(at_door, on_floor, empty).

move(at_door, at_window).
move(at_window, at_middle).

climb(at_middle, on_box).

take_banana(on_box, has_banana).

solve :-
    initial_state(at_door, on_floor, empty),
    move(at_door, at_window),
    write('Monkey moves to window'), nl,
    move(at_window, at_middle),
    write('Monkey moves to middle'), nl,
    climb(at_middle, on_box),
    write('Monkey climbs the box'), nl,
    take_banana(on_box, has_banana),
    write('Monkey gets the banana'), nl.
```

Output:
