Exp 29:Write a Prolog Program for forward Chaining. Incorporate required queries.

Code:

```
:- dynamic known/1.

known(sun).
known(water).

rule(plant_grows) :-
    known(sun),
    known(water).

rule(photosynthesis) :-
    known(plant_grows).

forward_chain :-
    (rule(X),
     \+ known(X),
     assertz(known(X)),
     write('New fact: '),
     write(X), nl,
     fail
    ; true).
```

Output:
