Exp14:Write the python program to implement Apha & Beta pruning algorithm for gaming

```
def alphabeta(depth, node, alpha, beta, maximizing, values):
    if depth == 2:
        return values[node]

    if maximizing:
        best = float("-inf")

        for i in range(2):
            value = alphabeta(
                depth + 1, node * 2 + i,
                alpha, beta, False, values
            )
            best = max(best, value)
            alpha = max(alpha, best)

            if beta <= alpha:
                break

        return best

    else:
        best = float("inf")

        for i in range(2):
            value = alphabeta(
                depth + 1, node * 2 + i,
                alpha, beta, True, values
            )
            best = min(best, value)
            beta = min(beta, best)

            if beta <= alpha:
                break
```

```
        return best
values = [3, 5, 2, 9]
result = alphabeta(
    0, 0, float("-inf"), float("inf"), True, values)
print("Best value:", result)
```
